

G-Loot FAQ

Q: *What is G-Loot?*

A: G-Loot is an esports platform for PC that lets you improve your skills and compete in challenges. The G-Loot PC client tracks your achievements while you play your games so you can become a better player while challenging yourself and others!

Q: *What do you offer?*

A: G-Loot adds something extra to your regular gaming sessions. The PC client analyzes your performance and provides you with useful stats that can help shape your playstyle, as well as fun challenges to complete in-game. Some challenges and leaderboards also offer prize money.

Q: *How does it work?*

A: Once you've created an account and installed the G-Loot client, you're ready to go. As long as you keep the PC app running in the background while you play, we'll log your gaming events and achievements.

Q: *How and why we collect game data*

A: The PC client tracks the events in the game you play and interprets your performance. These insights can both be valuable to you and place you on the leaderboards. The G-Loot client only tracks your game performance, nothing else.

Q: *How can players earn money?*

A: There are several ways to make money on G-Loot:

- Completing challenges against yourself
- Getting a high score in challenges against others
- Ranking highly on daily and weekly leaderboards

Some challenges have a small entry fee while others are free to play, and it's up to you which you prefer to enter. Leaderboards are free and you are entered automatically just by playing your game with G-Loot.

Q: *What kind of challenges are there?*

A: There are three types of challenges users can opt into. There are also leaderboards which users are ranked in automatically.

Sprint

Race against other G-Looters to climb a leaderboard in a set period of time. Sometimes you'll be racing for the most wins, while other challenges focus on headshots, kills, assists, etc. The higher your rank at the end of the challenge, the more you can earn

Solo

Challenge yourself to achieve a certain objective in your next match. As soon as you join the challenge, G-Loot begins tracking your progress. Some challenges offer unlimited retries while in others you have only a few chances to succeed. Every player who beats the challenge earns the reward. These challenges help you build your skills and improve as a player.

Versus

Compete against one not everyone. Go 1v1 against a rival in a winner-takes-all challenge. Choose the challenge you want to play (e.g. most kills or most damage) and we will match you with another G-Looter. Each of you plays one round and the player with the highest score takes the whole prize!

Daily and Weekly leaderboards

The daily and weekly leaderboards are ongoing and reset daily or weekly so you can earn rewards often. As long as you have the app running while you play, you're automatically entered for free.

Q: How does G-Loot handle cheaters? How do you handle cheating/exploitation etc. on the platform?

A: G-Loot takes cheating very seriously. We clearly state for each challenge which game modes we support and try to create content based on what is reasonable, to make our challenges as fair as possible. We also have a team keeping track of any unusual activities and investigating all reports of cheating thoroughly.

Q: How do you earn money as a company?

A: G-loot charges an entry fee for each monetized challenge and takes a percentage of the prize money.

Q: Can you use G-Loot on console or mobile?

A: The G-Loot PC platform has seen significant growth this year. Now G-Loot aims to cater to an even broader audience. As well as additional games, the company will be launching new custom challenges before the end of the year and has already started work on console gaming.

Q: Are there any benefits other than money?

A: G-Loot can also help you become a better player. The PC client tracks your stats across all games that are supported automatically while you play and offers you insights into your playstyle and abilities so you can figure out where you need to improve.

Q: What games do you support?

A: It's an ever-growing catalog: Right now we have AAA-titles like Apex Legends, it means that it doesn't need to be directly integrated with the games it supports and could be available for new titles just weeks after they are launched

Q: How do you control under-aged gaming? Handle Age Restriction?

A: G-Loot's content is strictly age-gated. No one under the age of 13 is permitted to use the platform and entering challenges with entry fees and deposited money can only be done by users over the age of 18. We use several different KYC (Know Your Customer) tools to verify the age and identity of people using our platform. Additionally, all withdrawals requests are carefully monitored by the compliance team to prevent under-aged gaming and fraud.

Q: What do you do to prevent addictive gaming?

A: The health and wellbeing of our users is a top priority for everyone in our team. G-Loot is designed to be an extra layer of excitement to your regular gaming and shouldn't detract from the game experience in any way. To protect our users, there is a strict limit on the amount of money that can be deposited into G-Loot each day. Additionally, we hope that our research into player-behaviour patterns will help us advise and guide users who may be falling into destructive behaviors.

Q: How are GLL and G-Loot connected?

A: GLL is a part of the G-Loot company. Through GLL, we organize online and offline tournament events alongside publishers and other partners.

Q: Is G-Loot gambling?

A: No. Gambling requires "an outcome determined on the basis of chance". G-Loot offers skill-based challenges where the outcome is based on the participant's own ability.
